With the Introcan Safety® IV Catheter
Safety is not an option—it's automatic.

B. Safe.
B. Automatic.

B. Safe.
B. Automatic.

Think your safety IV catheters are being activated?
When safety isn't automatic, results can be catastrophic.

Studies show:
- Up to 21% of safety IV catheters were not activated by the user.\(^1\)
- Safety devices were activated on only 83% of sample devices examined during audits of disposal containers.\(^2\)
- "...passive features are more effective in preventing needlestick injuries than devices that rely on a user-activated design."\(^4\)

The Introcan Safety® IV Catheter makes safety and compliance automatic.

B. Braun’s passive technology:
- Deploys automatically
- Cannot be bypassed
- Promotes compliance
