MAGNESIUM SULFATE IN 5% DEXTROSE INJECTION, USP

Indications

Magnesium Sulfate in 5% Dextrose Injection is indicated for:

- Prevention of eclampsia in patients with preeclampsia
- Treatment of seizures and prevention of recurrent seizures in patients with eclampsia

Contraindications

- Heart block or myocardial damage
- Diabetic coma
- Myasthenia gravis

Prescribing Information

MAGNESIUM SULFATE IN WATER FOR INJECTION

Indications

Magnesium Sulfate in Water for Injection is indicated for:

- Prevention and control of seizures in pre-eclampsia and eclampsia, respectively. When used judiciously it effectively prevents and controls the convulsions of eclampsia without producing deleterious depression of the central nervous system of the mother or infant. However, other effective drugs are available for this purpose.

Contraindications

- Intravenous magnesium should not be given to mothers with toxemia of pregnancy during the two hours preceding delivery.

Prescribing Information
